Setting up a serial port to use Stamp:

Open up stampw.exe. Go to “Edit”, then “Preferences”, then to the “Debug Port” tab. You want to set up a COM port for terminal 1. Click on the “… ” button.

It looks like most of the serial cables in ME308 are plugged into Com port 1. Check your computer to see which port the cable is plugged into. Next to “Com #”, enter the number corresponding to that port, then click on “Add”.

![Preferences dialog box](image1)

![Edit Port List dialog box](image2)
Now, select the COM# that you just added to “Known Ports” and click on “OK”.

Back in “Preferences”, select the COM# you just added from the “Com Port” drop down list, and click on “OK”.

You should now be able to program your board.
