INSTRUCTIONS FOR CREATING A SECONDARY AXIS ON A GRAPH IN EXCEL

To create a secondary axis
Right click on the curve (all the data points on that curve will be highlighted).
Select “Format Data Series”
Click on “Axis”
Click on “Secondary axis”
This creates a secondary y-axis (by default)

To make the x-axis the secondary axis
Right click anywhere in the plot area (except on a curve)
Select “Chart Options”
Select “Axes”
Under Secondary Axis, place check next to Value (X) axis

Show units on secondary axis
Right click anywhere in the plot area (except on a curve)
Select “Chart Options”
Select “Titles”
Fill in “Second value (Y) axis” or “Second value (X) axis” with the axis title and units
